HARRISON AND SONS, LTD., 44-47, ST. MARTIN'S LANE, W.C. 2  
FOR THE COMMITTEE OF THE CAPTAIN SCOTT ANTARCTIC FUND

1923.

## PREFACE.

WITH very few exceptions this volume contains a record of every meteorological observation taken on Captain Scott's last expedition from the time the *Terra Nova* left New Zealand on November 30th. 1910. to the time she returned on February 12th. 1913. In addition, it contains a copy of the meteorological record kept at Framheim, with the observations converted into English units.

Now that it is possible to review the meteorological work of the expedition as a whole one can see how much we owe to the fact that simultaneous observations were taken for the greater part of a year at Framheim, Cape Evans and Cape Adare.

When we heard that Amundsen was in the Antarctic, and in consequence the small party under Lieutenant Campbell which Scott had sent to work near King Edward VII Land had to go to Cape Adare instead, we all considered it a minor disaster. But for the meteorological work this was an advantage which it is impossible to over-estimate, in fact, it led to a distribution of stations unique in the history of polar exploration and one which could not have been attained by any possible amount of forethought. With these stations working for nearly twelve months simultaneously at the three corners of a triangle embracing the Ross Sea and each station about 400 miles from its nearest neighbour, the records from each station became of highly enhanced value, and problems could be investigated and solved which would have remained unknown after a hundred years of observation at one station alone.

Not only in the distribution of stations were we lucky, but also in the character of the observations taken. At Framheim the meteorological work of Captain Amundsen's party was not extensive but very reliable, especially the observations of pressure, temperature and wind. It was at Cape Adare, however, that the most remarkable meteorological work was performed. The party was small, consisting only of three officers and three men, but Mr. Priestley organised and carried through a set of meteorological observations and records which is a model for future expeditions. It is necessary to handle the original records to realise to the full the pains expended on this work, for all records were in duplicate, clean fair copies of all note books and diaries being provided. I cannot be too grateful to the men of this party, to Priestley, Browning and Dickason in particular, and I am sure that anyone who has occasion to study the meteorology of Cape Adare will share my gratitude for the remarkable meteorological diary printed in full on pp. 470-551 of this volume.

In addition to the land stations, the *Terra Nova*, on her three voyages between New Zealand and McMurdo Sound added a large amount of meteorological information. The logs kept on these three voyages have been printed in full, and they are logs of which the observers—mainly the late Lieutenant H. L. L. Pennell, R.N., and Assistant Paymaster Francis R. H. Drake, R.N.—may well be proud. I am particularly glad that these logs should be printed, for they deserve much more attention than I have been able to give them. They are a mine of information and will well repay investigation.

The preparation of this volume has been particularly arduous and if I had not found in Mr. Arthur H. Bell a trained meteorologist, able and willing to see the work through the press, the task might well have proved beyond my powers. The care with which Mr. Bell has made fair copies for the printer of my rough working tables, has checked the

data and compared the tables in this volume with those printed in Volume I, is beyond praise. That some errors remain I do not doubt, but I feel confident that few works of this nature have been more carefully scrutinised before issue, and for this I have to thank Mr. Bell.

With the issue of this Volume is brought to an end the task which I undertook in November, 1909, when Captain Scott asked me to join his expedition as meteorologist. The publication of the results has been long drawn out, but the times have not been normal times, and there is cause for gratification that in spite of wars and consequent financial difficulties it has been found possible to complete the work.

As stated on another page, the cost of the preparation and publication of this report has been defrayed from the Fund which was raised by public subscription in memory of Captain Scott and his companions. If this work proves to be a worthy part of the National Memorial to our great leader, I shall be deeply gratified and more than recompensed for all the time and trouble I have devoted to it.

G. C. S.

LONDON.

*February, 1924.*

## EXPLANATION OF THE TABLES.

### TITLES.

So far as possible the titles of the tables indicate their contents, while the elements tabulated and the units used are stated at the top of each table on the right hand side, and the place of observation on the left hand side.

### TIME.

Two times were kept by the expedition :—

(a) Standard time, which was twelve hours fast on G.M.T.

(b) Local time, the true mean local time for the geographical position.

These times were used as follows :—

Cape Evans : Standard time ; but as local time is 54 minutes behind standard time, it is sufficient for most meteorological purposes to deduct one hour from standard time to obtain local time.

Hut Point : Standard time.

Cape Adare : Local time.

Framheim : Local time.

*Terra Nova* : Standard time.

Sledging journeys from Cape Evans : Standard time.

„ „ Cape Adare : Local time of Cape Adare.

### DIRECTIONS.

All directions given in this volume are true. Observers on sledging journeys never recorded magnetic bearings, and the wind directions recorded in the *Terra Nova* logs have been corrected to true bearing.

### ITALIC TYPE.

Italic type has been used in the tables to indicate values which have been interpolated, or values which have been obtained by a method other than the one in general use. Such values have been used as sparingly as possible and only in those cases where there is good reason to believe that they are very near to the true values.

“TERRA NOVA” LOGS.

The *Terra Nova* logs were kept in the standard form of the London Meteorological Office (Form 131) and the instructions there given followed as closely as conditions permitted. The following additional notes, however, were pasted in the front of each log by the observer :—

*Position.*—The position is given as accurately as possible for every four hours instead of giving course, &c., as laid down in the form.

*Current.*—Current observations having been made a special feature are recorded in a book by themselves.

*Special observations of a Non-Meteorological character.*—Zoological, hydrographical and other subjects being each made a special study of, are recorded in their own books.

*Colour of Sea.*—The numbers found under this heading refer to “Code des Couleurs classés d’après la méthode Chevreul simplifiée par Paul Klingksieck et Th. Valette.”

*Colour.*—When colour is mentioned with a number, it refers to the above code.

*Temperature.*—When given without a decimal point is to the nearest degree only. If read closely and is an exact degree, it is logged thus : 67·0.

*Cloud Velocity.*—The following scale is used :—

|              |            |             |
|--------------|------------|-------------|
| ① Stationary | ① Slow     | ③ Fast      |
| ② Very slow  | ② Moderate | ④ Very fast |

*Cloud density.*—Indicated by the suffixes 0, 1, 2, 3, thus : 10<sub>3</sub> ; 6<sub>0</sub>

- 0 Very light cloud
- 1 Light cloud
- 2 Moderately heavy cloud
- 3 Heavy dark cloud.

*Green Flash.*—When sun sets on a clear horizon immediately it has disappeared, a tiny patch of brilliant green is sometimes seen where he was. Entries are made of this phenomenon, when observed under this heading.

*Nimbus.*—This name has been used for rain clouds even when rain is not falling at the actual moment.

*Rain* is classified as follows :—

|          |            |
|----------|------------|
| Drizzle  | Heavy      |
| Slight   | Very heavy |
| Moderate | Torrential |

The suffix <sup>ly</sup> is used when only an approximate direction can be given, for instance, in the case of waves or swell at night, light quarterly winds with the ship under weigh, direction of a confused sea, &c. Thus :

N<sup>ly</sup> . . . . . somewhere in the direction of N.

When a suffix is not used it is considered that the exact direction has been obtained.

*Time.*—12 hours fast on G.M.T., except where otherwise stated.

ORIGINAL RECORDS.

The original records and the papers used in working up the observations are stored in the library of the Meteorological Office, South Kensington, London, where they may be examined by permission of the Director.

## CONTENTS.

### SECTION I.—TEMPERATURE.

| TABLE |  | PAGE |
|-------|--|------|
| 1.    | Hourly values at Cape Evans ... .. .   | 2    |
| 2.    | Hourly values at Cape Adare... .. .  | 21   |
| 3.    | Monthly values at Hut Point, Cape Royds, Cape Evans, Cape Adare, and Framheim ... .. . | 31   |
| 4.    | Daily variation at Cape Evans ... .. .   | 32   |
| 5.    | Daily variation at Hut Point and Cape Evans combined... .. .                           | 31   |
| 6.    | Daily variation Fourier coefficients ... .. .  | 36   |
| 7.    | Maximum and Minimum, daily values at Cape Evans ... .. .                               | 37   |
| 8.    | Maximum, monthly values at Hut Point and Cape Evans ... .. .                           | 39   |
| 9.    | Minimum, monthly values at Hut Point and Cape Evans ... .. .                           | 39   |
| 10.   | Daily Range, monthly values at Hut Point and Cape Evans ... .. .                       | 39   |
| 11.   | Absolute maximum for each month at Hut Point and Cape Evans ... .. .                   | 40   |
| 12.   | Absolute minimum for each month at Hut Point and Cape Evans ... .. .                   | 40   |

### SECTION II.—WIND.

|     |  |     |
|-----|--|-----|
| 13. | Velocity and Direction, hourly values at Cape Evans ... .. .   | 42  |
| 14. | Velocity and Direction, two-hourly values at Cape Adare ... .. .   | 82  |
| 15. | Velocity, monthly values at Hut Point, Cape Evans, and Cape Adare ... .. .                                 | 92  |
| 16. | Velocity, daily variation at Cape Evans ... .. .   | 93  |
| 17. | Velocity, daily variation at Hut Point and Cape Evans... .. .  | 94  |
| 18. | Calms, daily variation at Cape Evans ... .. .  | 97  |
| 19. | Frequency of velocities at Jubbulpore ... .. .   | 98  |
| 20. | Frequency of velocities at Yarmouth ... .. .   | 99  |
| 21. | Frequency of velocities at Cape Evans (all winds)... .. .  | 99  |
| 22. | Frequency of velocities at Cape Evans (northerly winds)... .. .  | 100 |
| 23. | Frequency of velocities at Snow Hill ... .. .  | 101 |
| 24. | Frequency of velocities at Framheim ... .. .   | 102 |
| 25. | Frequency of velocities at Kerguelen ... .. .  | 102 |
| 26. | Frequency of velocities at North Polar Area ... .. .   | 103 |
| 27. | Frequency of velocities at Gauss Station ... .. .  | 101 |
| 28. | Frequency of velocities at Cape Adare ... .. .   | 105 |
| 29. | Direction. Frequency of occurrence, total wind and mean velocity for each direction at Cape Evans ... .. . | 106 |
| 30. | Direction. Percentage frequency of occurrence for each direction at Cape Evans ... .. .                    | 108 |
| 31. | Direction. Number of observations and mean velocity for each direction at Cape Adare ... .. .              | 109 |
| 32. | Total Wind, monthly values for each direction at Cape Evans... .. .  | 110 |
| 33. | Gustiness at Cape Evans ... .. .   | 111 |

## SECTION III.—CLOUD AND SUNSHINE.

|  | PAGE |
|--|------|
| TABLE 34. Cloud, four-hourly values at Cape Evans ... ..                               | 114  |
| .. 35. Cloud, two-hourly values at Cape Adare ... ..                                   | 125  |
| .. 36. Cloud, monthly values at Hut Point, Cape Evans, Cape Adare, and Framheim ... .. | 135  |
| .. 37. Cloud, daily variation at Cape Evans ... ..                                     | 136  |
| .. 38. Cloud, daily variation at Hut Point ... ..                                      | 138  |
| .. 39. Cloud, daily variation at Hut Point and Cape Evans combined ... ..              | 140  |
| .. 40. Cloud, daily variation at Cape Adare ... ..                                     | 141  |
| .. 41. Cloud frequency of amounts at Cape Evans ... ..                                 | 142  |
| .. 42. Cloud frequency of amounts at Hut Point and Cape Evans ... ..                   | 143  |
| .. 43. Cloud frequency of amounts at Cape Adare ... ..                                 | 143  |
| .. 44. Sunshine, duration at Cape Evans ... ..   | 144  |

## SECTION IV.—PRESSURE.

|  |     |
|--|-----|
| TABLE 45. Hourly values at Cape Evans ... ..   | 162 |
| .. 46. Hourly values at Cape Adare ... ..  | 208 |
| .. 47. Monthly values at Hut Point, Cape Evans, Cape Adare, and Framheim ... ..  | 218 |
| .. 48. Daily variation at Cape Evans ... ..  | 220 |
| .. 49. Daily variation at Hut Point... ..  | 222 |
| .. 50. Daily variation at Hut Point and Cape Evans combined ... ..   | 223 |
| .. 51. Daily variation at Cape Adare ... ..  | 224 |
| .. 52. Daily variation. Fourier coefficients, Hut Point and Cape Evans ... ..  | 225 |
| .. 53. Daily variation. Fourier coefficients, Cape Adare ... ..  | 227 |
| .. 54. Maximum and minimum values at Hut Point and Cape Evans—Absolute extremes for each month—Monthly means of daily extremes and of daily range ... .. | 228 |
| .. 55. Maximum and Minimum values at Cape Adare—Absolute extremes for each month—Monthly means of daily extremes and of daily range ... ..               | 229 |
| .. 56. Difference between mean pressure for January and July at eight Antarctic stations ... ..  | 230 |

## SECTION V.—DETERMINATION OF HEIGHT ABOVE SEA-LEVEL.

|   |     |

\* Mean for whole month from

OF VELOCITY AND DIRECTION.

1911.

V = Velocity in miles per hour.  
D = Direction.

NOTE.—The height of each individual camp has been obtained by taking the heights of the six main depots—South Barrier Depot, Lower Glacier Depot, Mid Glacier Depot, Upper Glacier Depot, 3° Depot, and Pole—determined by the procedure described in Vol. 1, Chapter IX, as fixed points, and then interpolating between them with the aid of the pressure observed at each camp.
