SIGNAL OFFICE,  
1889.

# UNITED STATES SIGNAL SERVICE DEW-POINT, RELATIVE HUMIDITY, AND VAPOR PRESSURE TABLES.

The following tables are published for the use of the observers of the Signal Service and other co-operating observers, to be used on and after July 1, 1889.

## *Use of the tables.*

The psychrometric formula below, and the tables based upon it, are for use in obtaining the dew-point and relative humidity from readings of the dry and wet thermometers. These tables are strictly applicable to roof shelters and the whirled psychrometer, but may be used without much error for all shelters fairly well ventilated. The formula (Ferrel's) is as follows:

$$p = p' - 0.000367 P (t - t') \left( 1 + \frac{t - t'}{1571} \right) \text{ In which,}$$

Errata in the tables published by the Signal Office, Washington, 1889, for the temperature of the dew-point, relative humidity, and vapor pressure:

- Page 4, horizontal line  $0^\circ$ , vertical line  $2^\circ.6$ ,  $-27$  should be  $-28$ .
- Page 4, horizontal line  $20^\circ$ , vertical line  $5^\circ.0$ ,  $-6$  should be  $-7$ .
- Page 5, horizontal line  $72^\circ$ , vertical line  $3^\circ.5$ ,  $17$  should be  $67$ .
- Page 5, horizontal line  $34^\circ$ , vertical line  $3^\circ.0$ ,  $16$  should be  $26$ .
- Page 6, horizontal line  $19^\circ$ , vertical line  $6^\circ.0$ , add  $-23$ .
- Page 6, horizontal line  $20^\circ$ , vertical line  $6^\circ.0$ ,  $-19$  should be  $-17$ .
- Page 7, horizontal line  $79^\circ$ , vertical line  $14^\circ.5$ ,  $66$  should be  $56$ .
- Page 11, horizontal line  $80^\circ$ , vertical line  $30^\circ.0$ ,  $-11$  should be  $-8$ .
- Page 12, horizontal line  $90^\circ$ , vertical line  $36^\circ.0$ ,  $-17$  should be  $-20$ .
- Page 13, horizontal line  $0^\circ$ , vertical line  $2^\circ.6$ ,  $24$  should be  $25$ .
- Page 14, horizontal line  $0^\circ$ , vertical line  $2^\circ.6$ ,  $26$  should be  $25$ .
- Page 15, horizontal line  $20^\circ$ , vertical line  $5^\circ.0$ ,  $30$  should be  $31$ .
- Page 20, horizontal line  $131^\circ$ , vertical line  $24^\circ.0$ ,  $46$  should be  $45$ .
- Page 21, horizontal line  $188^\circ$ , vertical line  $36^\circ.0$ ,  $30$  should be  $29$ .
- Page 23, "Dry thermometer" in each case should be "Dew-point."
- Page 23, at  $64^\circ$ ,  $.585$  should be  $.595$ .

This errata sheet will be pasted in the tables mentioned above, opposite page 3, and the corrections made as indicated.

WASHINGTON CITY, February 4, 1890.

A. W. GREELY,  
*Chief Signal Officer.*

# UNITED STATES SIGNAL SERVICE DEW-POINT, RELATIVE HUMIDITY, AND VAPOR PRESSURE TABLES.

The following tables are published for the use of the observers of the Signal Service and other co-operating observers, to be used on and after July 1, 1889.

## *Use of the tables.*

The psychrometric formula below, and the tables based upon it, are for use in obtaining the dew-point and relative humidity from readings of the dry and wet thermometers. These tables are strictly applicable to roof shelters and the whirled psychrometer, but may be used without much error for all shelters fairly well ventilated. The formula (Ferrel's) is as follows:

$$p = p' - 0.000367 P (t - t') \left( 1 + \frac{t - t'}{1571} \right) \text{ In which,}$$

$p$  = vapor pressure of saturation at the dew-point temperature.

$p'$  = vapor pressure of saturation at the wet-bulb temperature.

$P$  = barometric pressure.

$t$  = dry thermometer.

$t'$  = wet thermometer.

Having given  $t$  and  $t'$ , the values of dew-point and relative humidity at 29.4 inches pressure (chosen because it is the mean pressure for all stations) may be immediately taken from the tables.

## *Example.*

Given  $t = 60^\circ$ ;  $t - t' = 12^\circ$ . Entering the table on page 6, with  $t = 60^\circ$  and  $t - t' = 12^\circ$ , we find the dew-point =  $35^\circ$ ; and on page 16 the relative humidity = 39 per cent.

There is a small correction to be applied to these values, if great refinement is required, at pressures greater or less than 29.4 inches. This may be obtained by the use of the table on page 24 in connection with the vapor pressure given on page 23. Having found the dew-point, determine the vapor pressure corresponding to that dew-point.

Then in the table on page 24, with the air pressure and  $t - t'$ , find the correction to this vapor pressure. Find the dew-point corresponding to this corrected vapor pressure from the table on page 23, and with the corrected dew-point find the proper relative humidity.

## *Example.*

Given  $P = 27$  inches;  $t = 60^\circ$  and  $t' = 48^\circ$ . The table, as above, gives the dew-point  $35^\circ$ . The vapor pressure corresponding is .203 of an inch; correction from the table on page 24 for  $P = 27$  inches and  $t - t' = 12^\circ$  is  $\pm .010$ . Vapor pressure corrected, = .213; corresponding dew-point, =  $36^\circ$ .

Each page of the relative humidity table is ten pages ahead of its corresponding page of dew-points. The dew-point  $36^\circ$ , corrected for

barometric pressure, on page 6, is one line lower than the dew-point originally found. The corresponding line, on page 16, under the  $12^{\circ}$  heading, gives the corrected relative humidity 40 per cent.

For an observation falling outside the limits of the table, the nearest values to the observations in the tables will be taken as the dew-point and relative humidity. For example, for a reading of the dry thermometer of  $44^{\circ}$  and a difference of the dry and wet thermometers of  $15^{\circ}.0$ , there being no values given in the table for  $15^{\circ}.0$  those for a difference of  $14^{\circ}.5$  will be taken. The dew-point and relative humidity will therefore be recorded as  $-42^{\circ}$  and 2 per cent.

The values of the vapor pressures down to  $-58^{\circ}$  Fahrenheit used in computing these tables were obtained by means of Broch's formula, which is based on Regnault's observations. The lowest temperature at which Regnault observed vapor pressure was about  $-27^{\circ}$ .

In the series of observations from which the constants for the psychrometric formula given above was derived, the lowest dry thermometer temperature observed was  $6^{\circ}.4$  Fahrenheit.

A. W. GREELY,  
*Chief Signal Officer.*

SIGNAL OFFICE, WASHINGTON CITY,  
*July 1, 1889.*
